# PREMASGARD® 612x-Ether CAT P

Pressure measuring transducer for differential pressure and volume flow, incl. connection kit, Bluetooth-enabled, with EtherCATP port

Networkable pressure measuring transducer **PREM**ASGARD® **612x-EtherCATP** (series) with M8 plug-in connector (EtherCATP-encoded), Bluetooth-enabled, in an impact-resistant plastic housing with quick-locking screws, optionally with /without display and bar graph, nozzles for pressure hose ( $\emptyset$  6 mm), incl. connection kit **ASD-06** (2m connecting hose, two pressure port nipples, screws).

The on-wall sensor is used to measure positive, negative or differential pressure in clean air and gaseous media as well to calculate volume flows using the K-factor with function selection. The piezoresistive measuring element is temperature-compensated and guarantees a high degree of reliability and accuracy. The sensor is factory-calibrated.

It is used in the clean room, medical and filter technology, ventilation and air conditioning ducts, spray booths, large-scale catering facilities, for filter monitoring and level measurement or for triggering frequency converters. In case of direct solar irradiation, we recommend using our weather and sun protection hood **WS03** (accessory).

**EtherCATP-enabled measuring transducer** for industrial requirements with maximum reliability: includes easy PLC integration using the device's ESI configuration file, diagnostics (such as communication failure counter), advanced settings options, access to historical data (min / max) and establishing the sensor's service interval. Optionally with large illuminated display (3-line, customised programming in the 7-segment and dot-matrix range) and bar graph (7-digit, LEDs freely configurable) for graphical display, e.g., as a traffic light indicator.

### TP TYPES OF MONITORING:

- The pressure connections are on the housing with
- P1 (+) for higher pressure and
- P2 (-) for lower pressure. (A) Below-atmospheric pressure
- P1 (+) is not connected,
  - but open to the atmosphere
  - P2 (-) connected to inside of duct

## (B) Filter

- P1 (+) connected upstream of filter
- P2 (-) connected downstream of filter

#### (C) Ventilator

- P1 (+) connected downstream of ventilator
- P2 (-) connected upstream of ventilator

## (D) Volume flow

- P1 (+) dynamic pressure,
- connected in flow direction
- P2 (-) static pressure, connected free of dynamic pressure components
